aquamax KF Pro Reagent

Karl Fischer Reagent for Diaphragm Free Electrodes and Oven Techniques

The Single Solution Karl Fischer Reagent

Aquamax KF Pro Reagent offers simple filling and exchange whilst providing unrivalled accuracy when directly injecting a sample or when in use with Karl Fischer oven technologies.

Aquamax KF Pro Reagent is compatible with all coulometric titrators but when used with the unique closed loop principle found on Aqua 40.00 Vario and Aquamax KF Pro Oil titrators, methanol cannot evaporate allowing the instrument to fully maximise the water capacity of the solvent which can be used for up to 1000 measurement on single charge.

When the 500ml bottle is coupled with the Aquamax KF Swop Box reagent exchange module, the analysts will not have to handle the bottles or solvents for up to 5000 measurements.

ECH not only consider accuracy and speed but first and foremost, the safety of the analyst whilst providing minimal impact to the environment.

This is the ECH Advantage.

Aquamax KF Reagents combine speed, accuracy and safety with minimal environmental impact.

- Safer to use
- Safer to store
- Low cost
- Fast titration
- Reduced downtime
- Improved sample miscibility/solubility
- For use with all coulometers

Ordering Information

Part No.	Product description
303.10.0008	Aquamax KF Pro Reagent Kit (2 x 500ml)
